Hello Steve

The army was going to go out and take a look at the project in October. They haven't gotten back to me. I presume that the leaking pipe is going to put a kink in any pontoon project for a while.

Lindie,

I am just touching base with you to see how the pontoon project with the Army Reserve is going. Also, there was a pipe leaking onto the beach at that site that was identified while you were on leave. Potentially creosote. Thought you should be aware (if you hadn't already been advised) about that leak as you probably wouldn't want the Army group tracking it around the beach with their equipment. Thanks again.
